Characteristics

- To be discussed from Findy overview:

  - Target users → two check-box columns: "individuals", "organizational". What should we do with "developers"?

  - Numbering→ let's not do this, seems like we have a preference towards a wallet/agent

  - "Holder wallet" → "holder wallet + agent"

  - 'License' is a good one

  - 'Support' should be scoped

  - 'Contact e-mail' and 'support e-mail' are good, but let's make the content hyperlinks (for all links)

- Requested:

  - Private key secured by HSM

  - Public trust/discovery services?

  - Suitability for qualified electronic signatures (QES)

- Additional features:

  - More compliancy with interop profiles?

TNO innovation for life

Action list 30/11

- Merging the two overview

  - Technically merge it

  - Schema and schema validation in CI/CD

  - Add whether is contributed by wallet vendor

  - Link to credential comparison (Mirko)

  - Should we include use cases, and in which form?

- Merge the two updates from Gimly and iGrant.io (TNO repo)

- Filters

  - Library framework (angular material? See SIG credential comparison)

  - Choose what to filter on

- Contribution of vendors

  - Via PR

- Outreach to vendors

  - Ask for e-mail address contact info

- LinkedIn

- Within OWF

- Join the meeting (Microsoft Authenticator – wallet or not?)

- Outreach to users (Bo, ask Annika)

- Later, when we have more results
